

Emergency Management Services

We are your strategic sourcing specialist for utility wire and cable. Available 24/7 to provide support in the aftermath of any disaster. From our warehouses, nationwide, we offer a complete line of Overhead Bare Aluminum T&D Conductors, Service Entrance Cable, Spacer Cable/Tree Wire, Guy Wire, Bare Copper Conductor, Copper Clad Steel, Aluminum Clad Steel, Substation Control Cables, Hardware and more!

At AWG, our emergency response capabilities set us apart from our competition. We work with our customers around the clock until power or service has been fully restored.

AWG specializes in custom cables and hard to find items, ensuring that we can assist emergency response teams in locating the components and electrical hardware that they need.

We maintain a national network of distribution centers and warehouses, ensuring that we can respond quickly to emergencies in virtually any part of the country.

Our facilities are located across the country:

Florida | Puerto Rico | Pennsylvania | California

Emergency Response Case Study

When Hurricane Sandy hit the Northeastern United States in 2012, power lines were destroyed throughout the region.

The hurricane ended on a Friday morning, and AWG began receiving calls that evening for assistance in restoring felled power lines. Our staff rose to the challenge, working through the weekend to deliver more than \$2 million in transmission and distribution lines from our stock, with the first 75% delivered in less than 24 hours.

Utility operators throughout the Northeast praised AWG for our support in restoring service to residents of New York, New Jersey, Connecticut, and Massachusetts.

In addition to Hurricane Sandy, the AWG team has supported restoration and relief efforts during Hurricane Dorian, Hurricane Irma, Hurricane Maria, and Hurricane Ida, working closely with FEMA and utility providers throughout the United States and the Caribbean.
