
AMERICAN WIRE GROUP
EMPOWERING A BETTER WORLD

Emergency Management Services

Helping your preparation and restoration efforts

When natural disasters strike, power lines are often damaged or knocked down, leading to widespread electricity outages, leaving communities without electricity for extended periods. Natural disasters can wreak havoc on utility infrastructures, leaving a trail of destruction and significant challenges in their wake. Repairing and restoring power after such disasters can be a lengthy and complex process, requiring coordination between various agencies and the allocation of significant resources such as wire and cable.

In the aftermath of a disaster, American Wire Group's recovery services are what sets us apart from the rest. We offer an extensive inventory of wire & cable, hardware, accessories and equipment, and we work with our clients around the clock until power is restored.

We are committed to ship within hours, not days, during a disaster.

Having the largest inventory of wire and cable solutions, plus decades of experience in restoration efforts, is vital to our response and preparedness. Our inventory is strategically located in our national distribution centers: Pennsylvania, Texas, and California.

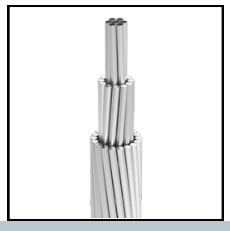
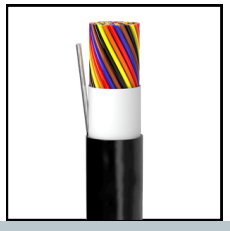
Empowering Your Storm Preparedness & Response Efforts

Our Inventory is Ready to Deliver in Days!

In times of disaster when urgent responses are needed, count on AWG's extensive inventory — featuring bare aluminum conductors, service drop, AerialGuard® tree wire and spacer cable, ControlGuard®, and bare copper — for immediate shipment from our national warehouses. Ensure rapid response and restoration with our dependable delivery in days.



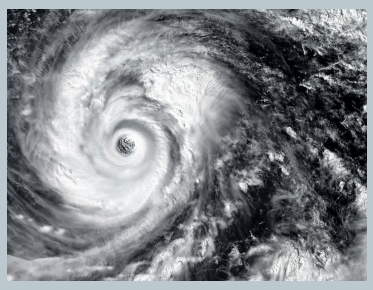


Emergency Response: Hurricane Beryl

Hurricane Beryl made landfall in the US on July 8, 2024, leaving the Gulf Coast without power during one of the hottest weeks of summer. Utilities needed to respond swiftly and quickly to provide aid to the 3 million people without power following the storm.

Once the storm passed, American Wire Group's Texas distribution center was able to immediately open its doors to aid in immediate restoration efforts. When our team began receiving requests from local utilities, we were able to confirm inventory on the spot, and ship product the next day. Customers received product within days to support storm recovery efforts.

In addition to Hurricane Beryl, our team has supported restoration and relief efforts during Hurricane Dorian, Hurricane Irma, Hurricane Maria, and Hurricane Ida, working closely with FEMA and utility providers throughout the United States and the Caribbean whenever disaster has hit to provide resources immediately.



Hardware & Accessories

Along with our extensive wire and cable inventory, we also offer hardware, equipment and accessories to aid in storm preparation and restoration efforts, including transformers, switchgear, spacers, and more.

Poles

Pole Line Hardware & Accessories

Switchgear & Breakers

Transformers

Spacer Hardware
